

Barrier free webdesign

Design and realization of barrier-free websites (websites optimized for disabled people) considering pretentious standards and demands by BITV and WAI (administrative order for barrier-free information technology in Germany and the Web Access Initiative in the US.)

Further advantages of standard conform websites and barrier free websites:

Complying with web standards can give your web pages greater visibility in web searches. The structural information present in compliant documents makes it easy for search engines to access and evaluate the information in those documents, and they get indexed more accurately.

Not only does this mean allowing the web to be used by people with disabilities, but also allowing web pages to be understood by people using browsers other than the usual ones - including voice browsers that read web pages aloud to people with sight impairments, Braille browsers that translate text into Braille, hand-held browsers with very little monitor space, teletext displays, and other unusual output devices.

Do you have further questions on the topic barrier free websites? Don't hesitate to contact us!

For more information please contact us by telephone: +1 310-928-3132 , via email: info@diatomUSA.com or via our [contact](#) form.

We look forward to working with you!
